

# PAXSTER

## Generation 2

**The new Paxster - Generation 2 - includes significant enhancements from which both the user and the owner will benefit.**

- Improved traction and acceleration thanks to a completely new powertrain and optimized gear ratio.
- Active regenerative brakes ensuring energy recovery to the batteries and simultaneously reduces the hand pressure required to operate the brake lever. With this concept, the braking force gradually increases and causes significantly less wear on brake pads and discs.
- Up to 20% increased driving range vs the comparable standard battery pack of Generation 1.
- The upgraded steering geometry contributes to easier vehicle handling at both low and high speeds and results in better directional stability.
- The new powertrain has a positive effect on the noise level. Significant reduction of noise during driving.
- New halogen headlamps contribute to improved headlight.
- A new suspension system provides easier handling and improved stability of the vehicle, especially in high speed and with a heavy load.
- For improved safety, a seat switch automatically disconnects the power supply when leaving the saddle.
- A new handlebar with improved ergonomics.
- Snap lock on rear doors for easier handling.

**The following options are available with Generation 2 vehicle:**

- Integrated front loader featuring a new feeder function for optimized ergonomics and efficiency in mail distribution.
- Optional battery packs with up to 50% extended driving range, compared to vehicle of Generation 1.
- Wind deflectors, which minimize turbulence and draft in the driver's compartment.
- Wiper interval switch.
- Heated hand grips for improved comfort during the cold season.
- Seat cover for improved heat insulation in winter.

**Through construction- and component changes in Paxster Generation 2, we expect reduction of Total Cost of Ownership.**
